

# CO<sub>2</sub> from Yeast-Sugar Fermentation to supply a trap for 3 days

- 1 Drill 6 mm hole in cap
- 2 Insert tube
- 3 Fix tube with hot glue from both sides
- 4 Drill two 6 mm holes in cap of smaller bottle, then repeat steps 2 and 3.
- 5 Connect tube with Biogents' CO<sub>2</sub> emitter nozzle.
- 6 Add yeast mixture to 5 L bottle. With the addition of yeast, CO<sub>2</sub> production will begin soon.

## Add to the 5 L bottle:

- 3 L water
- 700 g sugar
- 40 g yeast (dry baker's yeast)
